This test follows the test plan outlined at
https://github.com/tlessman/CIS322/blob/master/testdoc/test_plan.txt
Their test plan is very detailed but unfortunately nothing really works. I'm not going to rewrite each step that they have and why it all failed. Any time I submit data I get an internal server error. The individual knows this as well because we discussed it. If things were sort of working I would've done a more detailed write up.

A) Installation and Setup -- PASS
    1) PASS
    2) PASS
B) Creating Initial Users -- FAIL
    1) PASS
    2) Server Error
    3) Server Error
    4) Yes you can view the login screen
C) Logging Into Lost – FAIL Server Error
I couldn't login with any user name or password
